                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                           The sequence represents a DNA encoding a Plasmodium vivax merozoite surface protein (MSP). The C-terminal region of the merozoite surface protein has a strong antigenicity in malarial diseases. For diagnosis malaria, recombinant proteins with enhanced antigenicity, obtained by addition of fusion proteins to surface protein C-terminal regions, can reacted with serum or blood of a Plasmodium infected patient. Antigen-antibody composites will be formed, and these are detected by Enzyme Linked Immunosorbent Assay (ELISA). The recombinant antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2592
